Function: Program Management

Family: Enterprise Business Intelligence

Job Title: Executive Principal Data Scientist Distinguished Data Scientist

Job Abbreviation: [To be Completed by Compensation Team]

Hierarchy Group: Professional

Hierarchy Level: Professional 7

FLSA Status: [To be completed by Compensation Team]

Summary:

Responsible for leveraging internal and external data to provide insights and information which supports a facts-based decision making process. Provides leadership, mentoring, and guidance to others. Is a lead contributor and may participate in development of business strategy. Has business-wide impact/influence. Known expert within the field both internally and externally.

Responsible for leveraging internal and external data to provide insights and information to enable the optimal facts-based decision making process. You will provide leadership and input into strategy, analysis methods, and tool selection. Your work will revolve around understanding complex businesses, large and complex data manipulation, model building, model validation, model implementation and ensuring all model documentation provides full model transparency. Responsible for building and refining predictive and descriptive statistical models to improve insights, enhance data-driven business strategies, and drive improved profitability. You would develop next-generation analytic approaches where current generation approaches are not adequate. Responsible for thoroughly documenting the thinking and the details of models/processes to enable future analysts to pick the work up seamlessly. You will review, direct, guide, inspire the analytical work of more junior staff

Core Responsibilities:

- Serves as a recognized leader on a regular basis on multiple projects, spanning different engineering disciplines within the BlueWhale organization. HasCommand a good understanding of overall business, demonstrate in-depth understanding of predictive modeling life cycle, architect successful projects from inception through implementation including financial acumen,and ability to convert complex data into insights and action plans.
- Possesses a broad or deep scope of influence; isbe aware and responsive to higher level business drivers. Able to prioritize across teams and forge relationships with other teams. Drive and champion change; innovatively solve problems; is willing to take risks and contribute innovative ideas
- Work closely with a team within the marketing, sales, CARE, finance, engineering & analytics Units to clarify business objectives and deliver data solutions that meet the needs of the business and customers.
- Work with business team members (Product, Risk, and Engineering) to prioritize advanced analytic deployments

- Train and provide oversight and procedures for modeler / statistical team members on key projects. Evaluate all models and provide authorization of design, outcomes, and recommendations on implementation & validation steps
- Develop vision for data / analytics architecture and workflow across the company. Lead efforts to develop scalable, innovative approaches to extracting, managing, and analyzing data from customers
- Create roadmap for implementation of data and analytics strategy, including infrastructure design and development of data models. Establish data policies, standards, organization and enforcement of data governance
- Provides consultative direction for the Data Science team and the organization as a whole. Develop long-term objectives and plans on tactical and strategic issues. Determines resources, technology and course of action to achieve results.
- demonstrated in-depth understanding of predictive modeling life cycle and architects projects through implementation
- Functions with great autonomy and provides solutions and guidance independently on other engineering projects within the functional unit and outside. Provides consultative direction and develops long-term objectives and plans on tactical and strategic issues. Determines resources, technology and course of action to achieve results
- Lead efforts to define new infrastructure to extract, manage, and analyze data in a scalable way, and to make use of this data to improve our customers' efforts to develop best in class risk mitigations, acquisition engines, profitability algorithms, and new product enhancements
- Has the ability to innovate and evaluate at a senior level; drives solutions through other teams; thinks strategically across one or more technologies. Has a demonstrated track record of in-depth technical exposure and successful project delivery
- Interprets problems and provide solutions to business problems using data analysis, data mining, optimization tools, and machine learning techniques and statistics (e.g., predictive models, LTV, propensity models)
- Possesses a broad or deep scope of influence; is aware and responsive to higher level business drivers. Able to prioritize across teams and forge relationships with other teams. Drive and champion change; innovatively solve problems; is willing to take risks and contribute innovative ideas
- Runs larger, more complex projects; documents clearly; refines group process, delegates tasks, represents team on a project calls. Use best practice and knowledge of internal and or external business issues to improve products, services or in solving complex problems
- Shares data with team. Makes themselves replaceable. Does not develop silo views. Is able to communicate/collaborate with internal and external contacts/vendors; understands context of work outside function
- May lead a small group of less experienced team members on analytical projects or on cross-functional teams. Frequently serves as team lead on multiple projects, mentor and train junior team members on cutting-edge technology

Education Level: Master's degree required. PhD preferred

Field of Study: Quantitative fields such as Economics, Statistics, Mathematics, Decision Science, Operational Research, Computer Science or Engineering.

Certifications:

Years of Experience: Generally requires 10+ years related experience.

Skills:

- Proven record of work on significant and unique issues, where analysis of situation or data requires an evaluation of intangibles. Can look at the big picture and handle multiple projects at one time. Has good listening skills and demonstrates flexibility
- Advanced level proficiency with statistical probabilistic modeling techniques such as regression, decision trees, neural networks, support vector machines, supervised/unsupervised clustering techniques, etc.
- Expert theoretical knowledge of statistical modeling techniques and advanced applied skills in developing statistical targeting models using at least 2 of the following tools; SAS, R, KNIME, SPSS, Python, RapidMiner, KXEN, Bayesia, MATLAB, Statistica, Weka etc.
- Experience working within enterprise data warehouse environments platforms (Teradata, Netezza, Oracle, etc.) and working within distributed computing platforms such as Hadoop and associated technologies such as SQL, HQL, MapReduce, Spark, Storm, Yarn, Kafka, Sqoop and Hive
- Proficient in at least 1 scripting and/or programming language such as Scala, Julia, C#, Python, Perl, Java, C++
- Expert knowledge of statistical techniques such as design of experiments, experimental test design (A/B split, full factorial, fractional factorial), survival analysis, time series modeling, etc.

Compliance: BlueWhale is an EEO/AA/Drug Free Workplace.
